

Findings Suggest Ways Faith Leaders Can Facilitate Belonging

By [Springtide](#)

A new survey by Springtide Research Institute found that for many young adults, shelter in place and social distancing provokes fear and uncertainty, leading to increased levels of isolation, loneliness, and anxiety. The survey found that the single most important way to mitigate loneliness is for trusted adults to reach out and connect with young adults.

Summary:

- The survey consisted of a national panel of 508 respondents ages 18–25, with a margin of error of +/- 4% at a 95% confidence level, administered between March 24 and March 31, 2020.
- One in three respondents are sheltering in place alone.
- 63% of all respondents say that they do not feel as alone or isolated when people reach out to them.
- Among young adults who are sheltering in place with others, half still say that they feel alone, and nearly eight out of ten report feeling less lonely when a trusted adult from outside their household checks in on them.
- About 58% say they feel scared and uncertain, and 66% of those who feel this way say they don't have anyone to talk to about their emotions. Thus, they feel isolated because no one is reaching out to them.
- Respondents are not experiencing a decrease in their faith; in fact, 35% increased their faith and 47% stayed the same.
- Nearly 46% have started new religious practices, and 43% have participated in at least one religious service online.
- Yet 50% of those who have attended an online service report that they don't have anyone to talk to about how they are feeling, and 44% report feeling isolated because no one has reached out to them.

Social Distancing Affects Heightened Loneliness

Springtide surveyed a nationally representative sample of 508 young adults aged 18–25. One in three (32%) of these respondents live alone. These solo dwellers report some of the most troubling data of this survey. Within this particular subset, six out of ten of those young adults report feeling very isolated, and nearly half say they feel scared and do not want to be alone.

Shelter-in-Place and Loneliness

US Young Adults, 18-25 years of age

Yet, even among young adults who are sheltering in place with others, half of the participants say they feel alone. Many (39%) report their loneliness results from no one checking in with them.

“The survey found that when a trusted adult outside their house connected with young people, nearly eight out of ten report feeling less lonely” Springtide Social Distancing Study

Of those adults who reached out to young people, the most common connection was family and friends (89%), followed by teachers/professors (5%), bosses (2%), and clergy or faith leaders (less than 1%).

Impact of Trusted Adults Checking In

Nearly 8 out of 10 young adults (18-25 years of age) who have had a trusted adult check on them report feeling less lonely.

Effect on Faith and Religious Beliefs

During social distancing, the survey found that young adults are not experiencing a decrease in their faith. In fact, 35% report increased faith, while 47% report their level of faith staying the same. Almost half (46%) of respondents report having started new religious practices, and 43% have participated in at least one service online.

Seven out of ten people who watched an online service say that interacting with people, even virtually, makes them feel more connected. Yet, nearly half of those people still report feeling isolated because no one is reaching out to them individually.

Despite some young adults finding value in churches and religious or faith communities providing online rituals and virtual spaces during this time of social isolation, the survey

found that what mitigates their experience of loneliness is the act of caring adults checking in and connecting with them.

Meaningful Adult Relationships Mitigate Loneliness and Isolation

The survey findings follow a 2020 Springtide study report, *Belonging: Reconnecting America's Loneliness Generation*, which examined the effects of loneliness on a nationally representative sample of 1000 young people aged 13–25 across the US. *Belonging* found that 40% of young people feel as though they don't have anyone to talk to, resulting in increased rates of extreme stress.

Data from *Belonging* indicates that unlike previous generations, affiliation with social groups and institutions, including churches and religious groups, does not significantly

increase a young person's positive feelings of belonging. This is due in part to eroding trust in institutions and a perception that certain traditional tools for connecting are ineffective.

Belonging found that meaningful adult relationships are critical to a young person's well-being. The higher the number of positive adult relationships that are authentic, vulnerable, curious, warm, and structured, the more a young person will be able to cultivate positive feelings of belonging. The study reported that 62% of young people with zero trusted adult relationships feel completely alone. Conversely, for young people with five or more trusted adult relationships, only 9% report feeling alone.

Percentages of 13-to-25-year-olds who AGREE with each statement.

- **0 Trusted Adults**
- **5+ Trusted Adults**

I feel completely alone.

I feel as if no one understands me.

I feel left out.

I feel stressed and overwhelmed.
