

Connecting Nonprofits with Technology

Because technology is always advancing, both for-profit and nonprofit organizations aim to stay on top of the latest tools, applications, and innovations. [TechSoup Global](#) seeks to create an infrastructure for nonprofits to stay informed on how to use technology to increase their social impact. Through their online platform, NGO members in Africa, the Americas, Asia Pacific, Europe, and the Middle East share ideas on how to solve social issues and become agents of global change. They are then able to connect their respective communities to the best local and global technological resources to assist with the social issues they are focused on addressing.

As a “connector across sectors,” TechSoup Global is backed by more than 90 leading tech companies – including Microsoft, Adobe, Cisco, and Intuit– and they network with other social enterprises, companies, foundations, and technological activists. Their partner site, [TechSoup.org](#), offers free blogs, webinars, and forums to educate nonprofits on how to utilize technology. They also offer discounted and donated products and services, including high-value hardware and software from partner tech giants.
